

Network Faxserver

Faxer Network Faxserver Overview:

The **Faxer** Network Faxserver is a complete, highly economical, easy-to-use network fax server. It was designed to meet the needs of small to mid-sized businesses or workgroups, and comes with all the necessary hardware and software to allow network users to send and receive faxes from the desktop or browser.

Faxer Network Faxserver is a turnkey solution that connects to PSTN fax lines. It provides both software and web management interface, and allows you to receive faxes wherever you are as e-mails and send faxes from any application that can print. The system provides distributed faxing capabilities, over a WAN, from a corporate office to small remote offices as well as to field sales people.

Send and Receive Fax

- Automatic Format Conversion**
 The user can send fax by select Network Fax Server printer to convert the current document to fax format.
- Fax Queue**
 All faxes will be queued within Network Fax Server's fax queue. It has priority code to indicate the priority of the fax. Urgent fax will send out by next available line.
- Delay Fax Sent**
 Users can send faxes by specified time
- Fax Broadcast**
 Users may also be able to send the fax document to a number of different users. Fax Broadcast result can export to Excel format.
- Fax Resend**
 When the fax destination is busy or no answer, Network Fax Server will queue for resend. Users can set up the retry times in the software.
- Inbound Fax Routing**
 Network Fax Server will route the fax according to sender's input of the fax mailbox number and automatically route to users mailbox.
- Fax Status**
 The system automatically indicate real time fax status on top of web interface. It helps user to identify the fax line situation.
- Fax to Email**
 All received fax will be automatically send to user's folder. It also can setup to send to email account by attachment with TIFF format.
- Email to Fax**
 User can send fax from anywhere with internet connection. Just add the attachment to email and our fax server will automatically converts your email into fax and forwards it to the destination fax machine.
- Fax to Print**
 All received faxes can be printed out automatically.
- Fax to Folder**
 The sent and received faxes will be stored in any share folder specified by user

Main Feature

- Easy Installation and Cost Effectively**
 Faxer fax server is one time purchase product, it meets all network fax function you need, like Fax2Email, Fax Broadcast. It includes all required fax hardware, software and web fax management, fax client software. You don't have to worry about the fax modem and fax software compatibility.
- Desktop Faxing**
 Faxer fax Server allows you to deploy faxing to your entire user base so that they can send and receive faxes while sitting at their desks.
- Operate Independently**
 System running completely out of the computer. No server side software required. Fax stored in Network Fax Server.
- PBX Integration**
 After installing Network Fax Server behind PBX, It is able to listen DTMF code generated from PBX system. So fax can be delivered via PBX setting or analog DID/DDI service.
- Network Fax Sharing**
 Bavo Fax Server runs in TCP/IP network. User can share faxes and files within local LAN or even internet. It save time to deliver fax and save cost as well.
- CSID Support**
 User can identify the source of fax. It help to manage faxes more intuitive and more convenient
- Caller ID Support**
 Route all matched CID (telephone number routing) faxes to specify the user.
- Fax Backup**
 Fax Backup allows to store and backup the received or sent faxes to any share folder in server or PC automatically.
- Network Printing**
 It supports the received faxes to be printed out via network printing automatically.
- Income Fax Auto Routed**
 All income fax are auto-routed by rule, It can be directly to desktop fax client, email, share folder.
- Virtual Fax Extension**
 Faxer Fax Server allow you to create Virtual Fax Extension for single user or department, with DID integration, faxes will directly send to each user's email box.
